

## **Lab 1 – Creating Your First Web Page**

*Due January 26, 2018 @ 11:59pm via Github*

### **Step 1 – Before starting this lab...**

Take a deep breath and before starting this lab. :) Before you start this lab, please sign up for Github if you haven't done so and send me your Github username and email address before you begin. All starter files will be posted on Github, so you won't be able to start until I have your Github username.

### **Step 2 – Working on a text file called "index.html"**

In this lab, you will be following closely the first lesson in this class. You will be working with a file called *index.html* and it is your goal to follow the upcoming instructions.

### **Step 3 – Writing a template for Turtle ABC Co.**

You have been hired for **Turtle ABC Co.**, a very successful company cunningly built from the ground-up by yours truly, Evan. Your task is to be their web developer for this company. However, before you go into the specifics, you need to be able to write a webpage template for this company. (Yes, although Evan knows how to write a template himself, he's just too lazy to do anything and doesn't feel motivated to write up a full template right now. He'd rather play on his Monster Hunter Worlds for the PS4 and continue on dreaming about Nintendo Labo for the Nintendo Switch.) Of course, he half-heartedly wrote something that can be considered a webpage (but he felt lazy and left some blank spots... maybe he has lost his touch?).

Your job is to do the following:

- 1) Take a look at the *index.html* file. You will be working with that.
- 2) Notice that there are some spots you need to fill in. It is marked by the HTML comments (you can't miss them!)
- 3) Be creative! You do not need to be honed down to one specific answer here. :)

### **Submissions**

When you are done, submit your work through Github in a repository called "LabONE" shared by Evan before Friday, January 26, 2018 @ 11:59pm. Late submissions will not be marked. Any emailed submissions or work posted on Dropbox (or any other source other than Github) will not be considered for marking as well.

### **Marking Scheme**

You can view your marks on course\_PORTaL. This lab is worth 3% of your final mark.

<b><u>Categories</u></b>	<b><u>Marks</u></b>
Handed in work	/ 2
Followed all instructions	/ 3
<b><i>Total</i></b>	<b><i>/ 5</i></b>
