Lab 2 – "Pizazzing" Your Web Page

Due February 4, 2018 @ 11:59pm via Github

Step 1 – Before starting this lab…
Take a deep breath and before starting this lab. :) Download the lab work from the Lab 2 Github repository.

Step 2 – Working on two HTML files this time around… and a CSS file
In this lab, you will be following closely the second lesson in this class. You will be working with three files, *surprise.html, gohere.html,* and *pizazz.css.* It is your goal to follow the upcoming instructions.

Step 3 – Writing a template for Turtile ABC Co.
Whimsical Labs, an innovative laboratory that was created by **Turtile ABC Co.**, is experimenting on design on a website. Of course, none of the people there know how to style anything on a webpage. (They love to read text, you see.) Seeing that your skill is invaluable in **Turtile ABC Co.**, Evan decides to ~~ship you off~~ assign you to their innovative lab to help those ~~old~~ young computer scientists style a couple of webpages they have created.

Your job is to do the following:
1) Take a look at those files. You will be working with those files closely.
2) There are some spots to fill in all files… however, please note that it is up to you to utilize the *pizazz.css* file on both, mix-and-match the <style> tag and the usage of the *pizazz.css* file, or completely use the <style> tag. (Of course, I'd look under the **Achievement Marks** section of this lab to be sure of what I need to be able to score higher on the lab if I were you…)
3) Again, be creative! There are a couple of places where you are limited to one answer, but in most places you do not need to be honed down to one specific answer here. :) Designing and styling a webpage is up to you here.

Submissions

When you are done, submit your work through Github in a repository called "Lab2-<github name>" shared by Evan before Friday, February 2, 2018 @ 11:59pm. Late submissions will not be marked. Any emailed submissions or work posted on Dropbox (or any other source other than Github) will not be considered for marking as well.

Achievement Marks

You can view your marks on course_PORTaL. This lab is worth 3% of your final mark.

Achievements	*Marks*
Avoided usage of the <style> tag in surprise.html	/ 1
Used a <style> tag in gohere.html (and possibly defined the "style" in different HTML tags)	/ 2
surprise.html utilizes flexbox and content is decently organized	/5
Total	/ 8
